

Name _____

NC.4.NF.4 CFA (Cluster 7)

1. A fraction model is shown below.

Which equation correctly shows the fraction of the shaded parts?

a) $\frac{1}{4} + 3 = 3\frac{1}{4}$

b) $3 \times \frac{1}{4} = \frac{3}{4}$

c) $\frac{1}{4} \times \frac{3}{3} = \frac{3}{12}$

d) $\frac{1}{4} \times \frac{1}{4} = \frac{1}{16}$

2. What is the product represented by the model shown below?

a) $\frac{1}{5}$

b) $\frac{5}{8}$

c) $\frac{5}{5}$

d) $\frac{8}{5}$

$8 \times \frac{1}{5}$

3. Jane and Melissa are trying out for the swim team. Jane swam $\frac{2}{3}$ of a mile. Melissa swam 4 times as far as Jane. How far did Melissa swim?

a. $\frac{6}{3}$ of a mile

b. $\frac{2}{7}$ of a mile

c. $\frac{8}{3}$ of a mile

d. $\frac{2}{12}$ of a mile

$$\frac{2}{3} + \frac{2}{3} + \frac{2}{3} + \frac{2}{3} = \frac{8}{3}$$

$$4 \times \frac{2}{3} = \frac{8}{3}$$

4. Jackson has 3 cats. He feeds $\frac{3}{4}$ of a cup of cat food to each cat every day. How many cups of cat food does Jackson need to feed his 3 cats for a week?

a. 10 cups

b. $10\frac{3}{4}$ cups

c. 15 cups

d. $15\frac{3}{4}$ cups

$$\frac{3}{4} + \frac{3}{4} + \frac{3}{4} = \frac{9}{4}$$

$$7 \times \frac{9}{4} = \frac{63}{4} = 15\frac{3}{4}$$

$$\begin{array}{l} 4 \times 10 = 40 \\ 4 \times 15 = 60 \end{array}$$

5. A professional soccer player buys 16 acres of land. He plans to build a house on the land but wants to use $\frac{2}{8}$ of the land to put his own soccer field and facility on. How many acres of land will the soccer player need for his soccer field and facility?

a. $\frac{32}{2}$

b. $\frac{32}{8}$

c. $\frac{32}{128}$

d. $\frac{16}{128}$

$$\frac{2}{8} \text{ of } 16$$

$$\frac{2}{8} \times 16 = \frac{32}{8}$$

6. Alexandra has 60 flowers in a vase. She gave $\frac{2}{10}$ of the flowers to her neighbor as a random act of kindness. How many flowers does Alexandra still have left in her vase?

a. 12

b. 20

c. 48

d. 80

$$\frac{2}{10} \text{ of } 60 = 12$$

$$60 - 12 = 48$$

$$\text{OR } \frac{8}{10} \text{ of } 60 = \frac{480}{10} = 48$$

7. Bill is looking to rent a storage unit. The storage company told him that their largest storage unit measures 8 feet by 24 feet but Bill doesn't think that he needs all of that space. The next size is $\frac{6}{8}$ as long and $\frac{6}{8}$ as wide. What are the measurements of the smaller storage unit?

- a. 7 feet by 18 feet
- b. 5 feet by 13 feet
- c. 9 feet by 21 feet
- d. 6 feet by 18 feet

$$\frac{6}{8} \text{ of } 8 = 6 \times$$

$$\frac{6}{8} \text{ of } 24 = 18$$

8. Walker had 6 containers of Legos.

- a. Each container had 50 Legos.
- b. He built a city using $\frac{3}{10}$ of the Legos out of each of the containers.

$$\frac{3}{10} \text{ of } 50 = 15$$

$$15 \times 6 = 90$$

How many Legos did Walker use to build the city?

- a. 15
- b. 30
- c. 60
- d. 90

9. The doctors at a hospital need to see 128 patients today. If they have already seen $\frac{5}{8}$ of the patients, how many patients do they still need to see today?

- a. 80
- b. 75
- c. 48
- d. 90

$$\frac{1}{8} \text{ of } 128 = 16$$

$$\frac{5}{8} \text{ of } 128 = 80$$

$$128 - 80 = 48$$

OR

$$\frac{3}{8} \text{ of } 128 = 48$$

10. A textbook is $\frac{5}{6}$ of an inch thick. If 7 textbooks are stacked on top of each other, how tall is the stack of textbooks?

- a. 6 inches
- b. $7\frac{5}{6}$ inches
- c. 8 inches
- d. $5\frac{5}{6}$ inches

$$\frac{5}{6} \times 7 = \frac{35}{6} = 5\frac{5}{6}$$

$$\frac{5}{6} + \frac{5}{6} + \frac{5}{6} + \frac{5}{6} + \frac{5}{6} + \frac{5}{6} + \frac{5}{6} = \frac{35}{6}$$
